The R&D clock is running backward

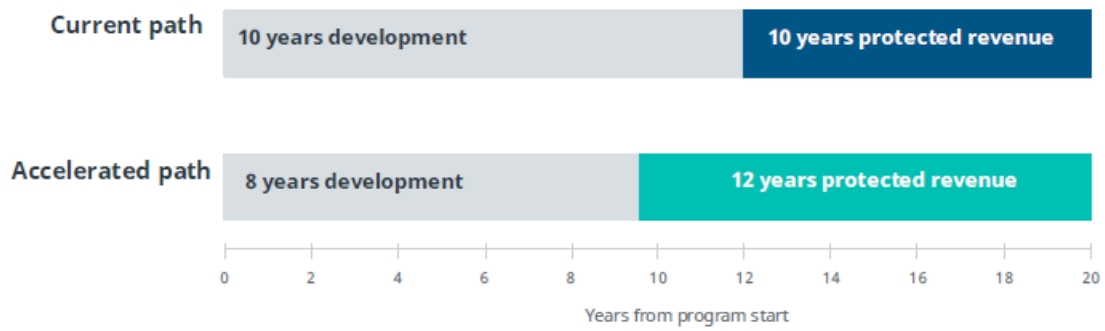

Composite median R&D program duration: 8 years in 2016, 10 years in 2025

Source: Citeline Pharmapremia and IQVIA Institute, February 2026
Every added year is a year of lost protected revenue
This is published benchmark data you can cite in any sponsor meeting

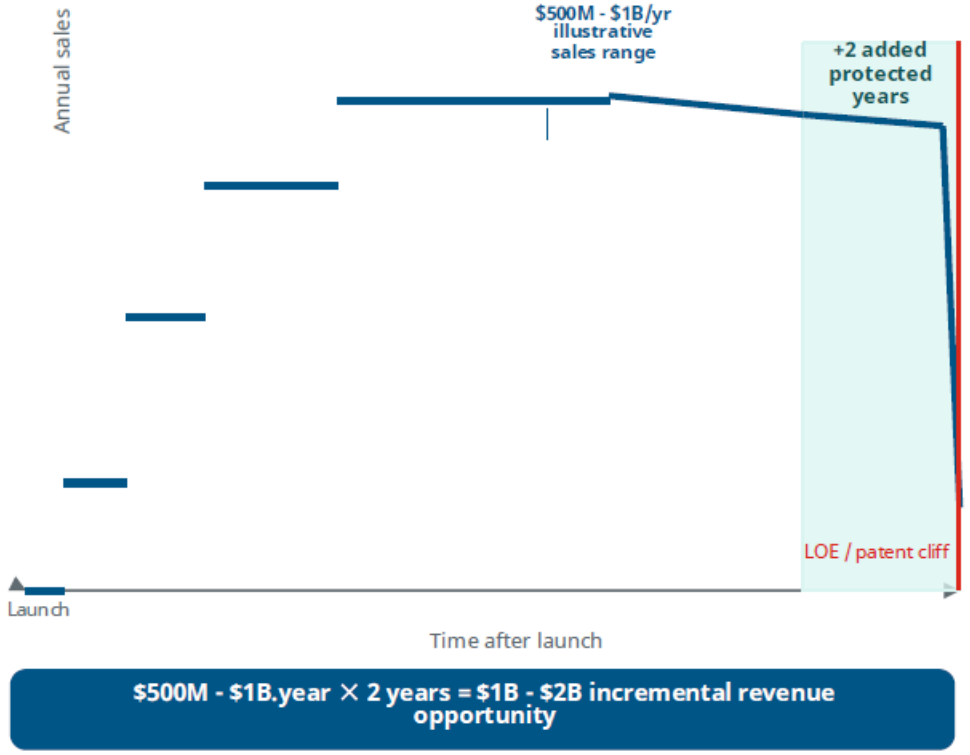

Development time becomes commercial time

Timeline: development time becomes commercial time*

A launch pulled forward by two years turns "development time" into two additional years of revenue.

Revenue curve: those two years land before loss of exclusivity

$500M - $1B.year × 2 years = $1B - $2B incremental revenue opportunity

Value math	Annual sales × 2 added protected years	$500M /yr → $1B	$750M/yr → $1.5B	$1B/yr → $2B	Beyond dollars: earlier NPV, more time to build standard of care, less value lost to LOE.

The headline claim — and how to say it correctly

IQVIA Predictive Clinical Development can deliver up to two years off a 10-year program Always qualify: actual timelines vary based on program-specific factors and are not guaranteed
Based on IQVIA analyses of client programs utilizing Predictive Clinical Development and adoption of IQVIA-recommended study delivery approaches
Overstating this claim creates legal and commercial risk — internalize the language

Practice Live 1

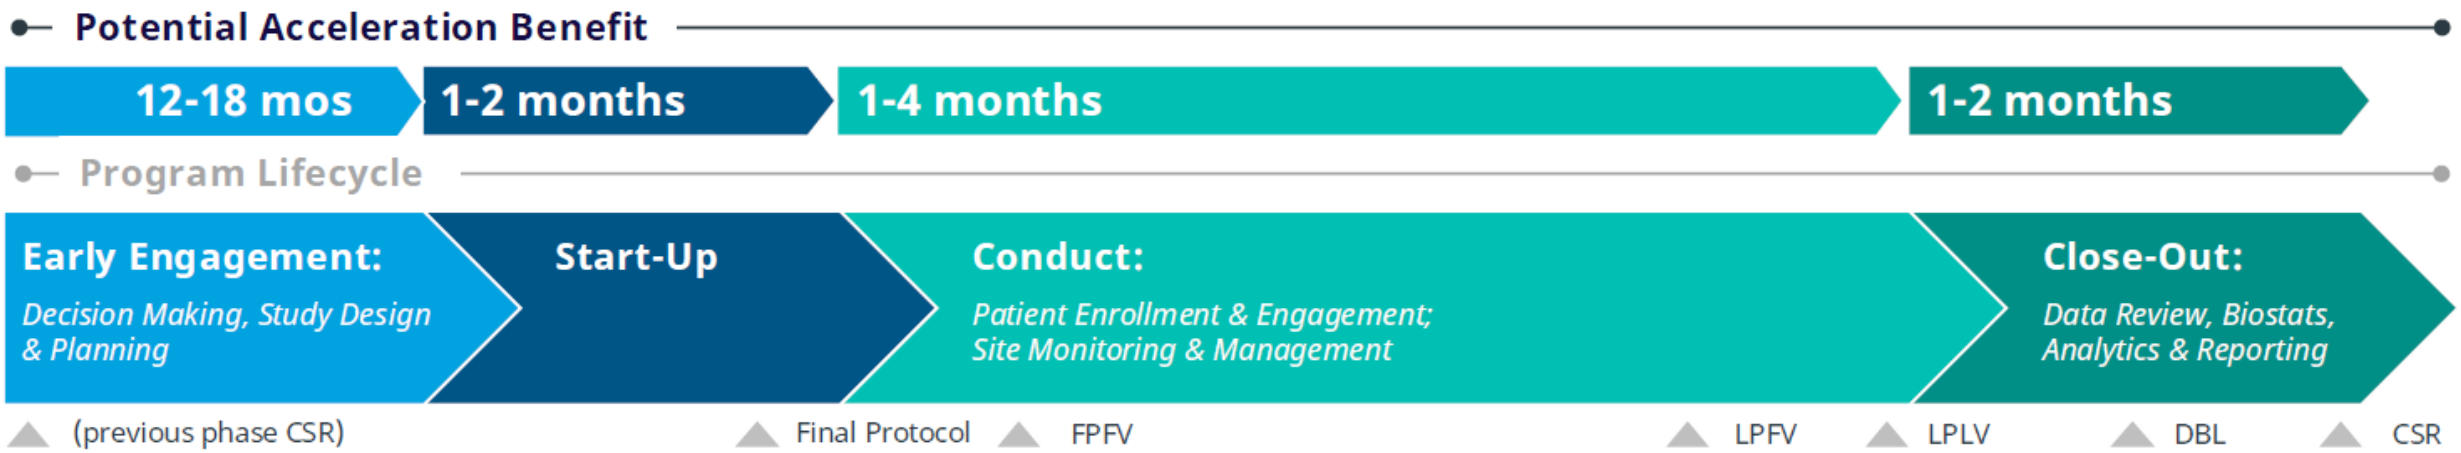

Make the math personal to your sponsor

Your voice instructor is ready to run a number-translation exercise with you

Tell your instructor the hypothetical annual sales figure for a sponsor asset you are working on
Your instructor will walk you through calculating that sponsor's specific incremental revenue opportunity

Ask your instructor to run the number-translation exercise with you now

IQVIA Predictive Clinical Development offers end-to-end acceleration delivering measurable timeline reduction of up to two years off a ten-year program

Execution Enablers

- Regulatory strategy (pre-IND planning)
- Endpoint strategy
- Study planning & design
- Parallel planning and operations
- Biomarker & lab strategy, and integrated risk planning

- Push-button Start-Up:
  - Sites ready to enroll
  - Database Start-up
  - Lab Set-and Start-Up Automation
  - Translations planning
  - Supplies planning

- Site networks & SMO
- Site support
- Patient recruitment
- Accelerated monitoring
- Comprehensive data review
- Biospecimen lifecycle management

- Document generation
- Early engagement for next phase strategy

AI Predictors and Accelerators

Enhanced program & study design using AI for study design & planning, regulatory start-up, and patient enrollment & engagement

Faster operational execution using AI enablers for site monitoring & management, data review, biostatistics analytics & report, submission & post-marketing

© 2026. All rights reserved. IQVIA® is a registered trademark of IQVIA Inc. in the United States, the European Union, and various other countries.

Early Engagement — the entry point you can propose today

What will we achieve

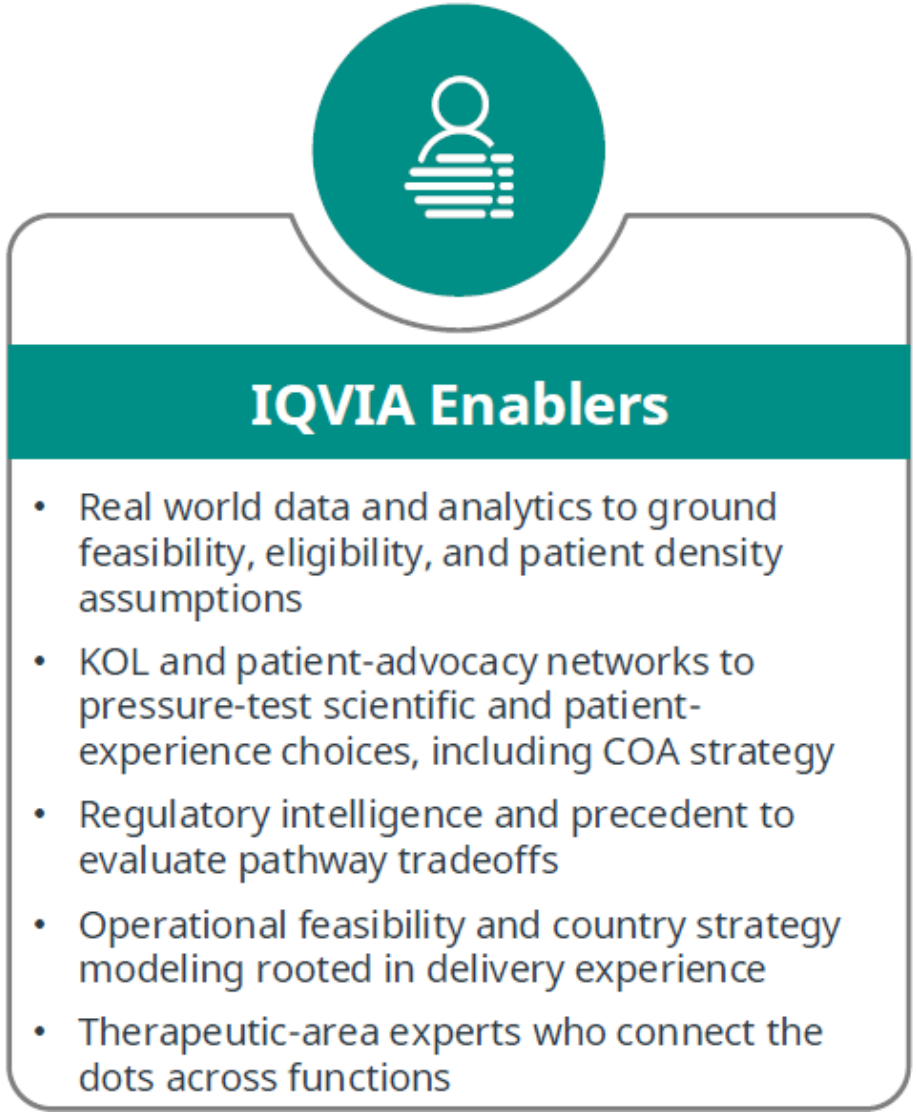

- A focused pre-protocol working session with clinical, regulatory, operational, and real-world data experts in the room
- Artifacts produced together: feasibility view, endpoint tradeoff matrix, country scenario models, risk register
- Decisions unlocked: target population, primary endpoint, regulatory path, country mix, recruitment approach
- Output: a shared decision log your team carries into protocol writing with confidence

Illustrative Timelines

- Weeks 1–2: align on critical open decisions and define success measures together
- Weeks 3–6: bring evidence, precedent, and expert perspectives into focused working sessions
- Weeks 7–10: stress-test feasibility, endpoints, and country strategy with real-world inputs
- Weeks 11–12: finalize the shared decision log and hand off to protocol writing team with conviction

What IQVIA brings into the room

© 2026. All rights reserved. IQVIA® is a registered trademark of IQVIA Inc. in the United States, the European Union, and various other countries.

Study Design and Strategy — one integrated strategy eliminates handoffs

- One integrated study strategy eliminates handoffs, rework, and delays
- Built on CtQ factors, RBQM, patient/site insights, and integrated risk management
- Push-Button Start-Up cuts start-up time from 12 to 8 weeks (33%)
- Enabled by standardization, automation, parallel execution, and less rework

Conduct — enrollment, sites, and data in motion

Close Out — speed from database lock to CSR

Database lock under 14 days

- Driven by 81% faster data entry at sites and greater than 50% faster data cleaning

SDTM creation reduced from 8 to 6 weeks

- Where 90% or more standards compliance is achieved

CSR narratives completed 35% faster

- Clinical Study Report delivered in 8 weeks

Greater than 90% fewer lab queries

- With e-requisition

Tables, listings, and figures development reduced by 60%

- Significant compression in reporting timelines

Topline BIOS outputs

- Available 15 to 20 days post database lock

The data ecosystem behind every speed claim

Daily automated data transfers from EDC, lab, IRT, eCOA, and connected devices into a centralized ODS

Real-time data cleaning, integrated RBQM, and automated issue generation

Cross-functional data review through a single platform: Clinical, DM, Biostatistics, Medical, Safety, Lab

This is the operational infrastructure behind every metric — not a feature list

IQVIA

The AI roadmap — live now versus in development

Never represent an in-development tool as currently available — this is a firm boundary.
These demonstrate forward momentum and a credible technology trajectory

Live Now

- Protocol Analyzer
- Enrollment Optimizer
- Regulatory Intelligence Assistant

In Development

- Tools in development are evidence of continuous, roadmapped AI investment

Practice Live 2

Metric recall drill

Your voice instructor will name a phase or a specific activity. Respond with the correct acceleration metric and time comparison

Your instructor will give immediate feedback and correct any errors

Ask your instructor to run the metric recall drill with you — repeat until you move through the full set without prompting

Two sponsor personas, two different conversations

Same solution, different frame — match the language to what each persona values most

Emerging Biopharma

- Accelerate proof of concept
- Reduce investor and governance risk
- Advance multiple assets without building infrastructure
- Bring value inflection points forward

Large and Mid Pharma

- Improve portfolio performance at scale
- De-risk before delays occur
- Improve global consistency
- Supplement in-house capabilities without replacing them

© 2026. All rights reserved. IQVIA® is a registered trademark of IQVIA Inc. in the United States, the European Union, and various other countries.

What requirements does the sponsor need to meet to achieve the time savings?

- Engage with IQVIA at the Pre-IND/IND clinical development plan stage, including during protocol concept, and incorporate regulatory, endpoints, feasibility and study design feedback
- Deploy a full-service outsourcing model across the development program utilizing IQVIA's processes and technology solutions
- Adopt protocol optimization, regulatory path strategy, operational strategies including feasibility, recruitment and site support recommendations & tech solutions
- Collaboratively identify at-risk activities, begin the next phases planning when prior phase Interim Analysis 'go' decision is made (including IQVIA 'at risk' planning and task delivery)
- Establish parallel activities centrally and in-region to ensure optimal risk parameters to include in the database build and monitoring plan to ensure startup and downstream data delivery are handled efficiently and with adequate risk controls
- Run parallel global and regional activities to identify risks and mitigations to incorporate into the database build and monitoring plans to ensure startup and downstream data are handled efficiently

Handling the two most predictable objections

Objection: we have already started

- Assess which phase they are in and whether the six requirements can still be met; Early Engagement is the clearest entry point, but start-up and conduct tools still add value

Objection: can you guarantee the two years

- The answer is always no

- **Correct language**: up to two years, based on IQVIA analyses of client programs utilizing Predictive Clinical Development and adoption of IQVIA-recommended study delivery approaches; actual timelines vary based on program-specific factors and are not guaranteed

Practice Live 3

Sponsor persona role-play

Tell your voice instructor which persona to play: Emerging Biopharma VP of Development or Large Pharma Head of Portfolio Operations

Your instructor will open with a realistic concern or objection

Respond using the messaging and qualification framework from this module

Ask your instructor to run the persona role-play with you — you can repeat the same scenario or switch personas

The conversational sequence — start to close

1. Open with the burning platform — 8 to 10 years, published benchmark data
2. Pivot to revenue math — Development time becomes commercial time, $1B to $2B framing
3. Introduce the solution at headline level — Up to two years, two delivery modes, with the required qualifier
4. Anchor to the relevant phase — The phase most relevant to where the sponsor is right now
5. Qualify readiness — Against the six requirements
6. Propose Early Engagement — As the immediate and concrete next step

© 2026. All rights reserved. IQVIA® is a registered trademark of IQVIA Inc. in the United States, the European Union, and various other countries.

Early Engagement as the close of the first conversation

The 11-to-12-week framework gives a sponsor something specific to say yes to

What they walk away with: feasibility view, endpoint tradeoff matrix, country scenario models, risk register, shared decision log

Describe all five without reading from a document — that fluency signals expertise

The sales message: let's start with the one decision where evidence and experience could create the most acceleration

IQVIA

What IQVIA is not claiming — stay inside these boundaries

- Not a guarantee of two years saved — always use the qualifier
- Not a replacement for sponsor in-house capabilities, especially for Large and Mid Pharma
- AI tools in development are not sold as current deliverables
- Staying within these boundaries builds sponsor trust and protects IQVIA's credibility

© 2026. All rights reserved. IQVIA® is a registered trademark of IQVIA Inc. in the United States, the European Union, and various other countries.

What IQVIA is not claiming — stay inside these boundaries

Burning platform

Here is what slow costs you

Revenue math

Here is what fast is worth

Solution and proof

Here is the specific path to getting there

Entry point

That structure is the pitch

Practice Live 4

Capstone 90-second pitch

Deliver a 90-second pitch aloud to your voice instructor

Your instructor will give feedback on three dimensions: accuracy of the headline claim and disclaimer, correct persona identification and tailored message, and whether Early Engagement was described as the next step

Ask your instructor to listen to your capstone pitch — your instructor will invite you to try again if any dimension needs improvement

TAKEAWAY

Optional — test yourself before your first conversation

If you want to confirm you have the key numbers and disclaimer language ready, your instructor can run a quick knowledge check

Just ask — nothing is recorded, and it is entirely for your own preparation

Optional: a private knowledge check is available — nothing is recorded
