

An Introduction to Google NotebookLM

Module 1

- Slow, scattered source review
- Need faster, grounded summaries
- NotebookLM: source-grounded AI
- Cites your uploaded sources
- Builds audio and video overviews
- Decide when NotebookLM fits

Core panels and artifacts

Module 1

Three panels: Sources, Chat, Studio

Sources: docs, slides, PDFs

Also text, markdown, audio files

YouTube uses public transcript only

Artifacts: Audio, Video Overviews

Chat: summaries, Q&A, citations

End-to-end workflow basics

Module 2

01

Create independent notebooks per project

02

Add, label, manage up to 50

03

Set output language, toggle sources

04

Generate Audio Overview, expect glitches

05

Create Video Overview in Studio

06

Save notes, export with citations

Quality, review, and controls

Module 2

Regenerate with clearer instructions

View custom prompts for artifacts

Toggle sources to test grounding

Editors required for audio generation

Auto-overviews may generate on add

Verify outputs, expect occasional glitches

Value, risks, and governance

Module 3

Value: speed, reuse, citations

Stakeholders: comms, marketing, enablement

Risks: experimental audio, not advice

Respect copyright, share with rights

Share: viewer vs editor permissions

Analytics: users, queries per day

Individual practice and objections

Module 3

- 1 Create and name a notebook
- 2 Add a PDF and YouTube
- 3 View summary, check citations
- 4 Toggle a source, compare answers
- 5 Generate audio and video overviews
- 6 Handle IP, accuracy objections
