

TECHIQ 2026

Are You Ready to Walk Into TechIQ and Win?

In the next 60 minutes you will get to know your buyers, own your pitch, and leave with a plan to follow up every conversation with confidence.

What You Will Walk Away With

Recognize the four buyer personas instantly

Deliver a sharp CTFS pitch — short, medium, or long version

Go deep on the brand-new Contracting module

Handle objections without flinching

Leave TechIQ with a 30-day follow-up plan in hand

First — Watch the CTFS Overview

Before we dive in, take two minutes to see the platform in action. This frames everything we cover in the next hour.

Watch: [CTFS OVERVIEW](#)

MODULE 1

Module 1 — Know Your Buyer

Clinical trial financial pain is shared across the organization — but every stakeholder feels it differently. Speak to the right pain and you have their attention. Miss it and you are just another vendor.

Persona Drill

Practice Live

Over the next few slides, you will meet our four core buyer personas, covering their key responsibilities and a typical conversation scenario.

Then, you will put this knowledge into practice. Your instructor will role-play these stakeholders in a live voice interaction, coaching you on your discovery questions in real time.

The Four Personas You Might Meet at TechIQ

Buyer Persona Profile: Gilbert (Clinical Operations Director)

Role & Overview

Gilbert is a Clinical Operations Director at a sponsor organization. His primary focus is operational execution, trial speed, and maintaining strong relationships with clinical trial sites.

Core Pain Points

- Fragmented financial visibility across studies and sites.
- Slow trial execution caused by manual financial reconciliation.
- Site dissatisfaction and frustration due to delayed or disputed payments.

Key Value Drivers

- **End-to-End Platform:** Unifies grant budgeting, contracting, forecasting, and payments in one system.
- **Global & Multicurrency Readiness:** Handles complex international trials without custom manual workarounds.
- **AI-Powered Automation:** Cuts manual document and CTA processing drag.

What He Is Really Asking

"Why are my sites frustrated, and how do I fix payment cycle times so we can activate sites faster and run trials smoothly?"

The Four Personas You Might Meet at TechIQ

Buyer Persona Profile: Rachel - Site Operations Director

Role & Overview

Rachel is the Site Operations Director. She manages day-to-day trial execution at the site level, focusing on operational efficiency, resource allocation, and site financial health.

Core Pain Points

- Unpredictable cash flow and delayed payment cycles from sponsors.
- Highly manual, error-prone invoicing processes that consume valuable administrative time.
- Frequent payment disputes and the administrative burden of chasing multiple sponsors for status updates.

Key Value Drivers

- Automated invoice creation mapped directly to clinical trial agreement (CTA) terms.
- Real-time payment visibility through a single, sponsor-agnostic portal.
- Faster payment cycle times and significantly reduced financial disputes between sites and sponsors.

What She Is Really Asking

"When will I stop chasing sponsors for payment updates and get predictable, hassle-free cash flow for my site?"

The Four Personas You Might Meet at TechIQ

Buyer Persona Profile: Reena - VP IT Clinical

Role & Overview

Reena is the VP of IT Clinical. She oversees the organization's clinical technology infrastructure, ensuring systems are secure, compliant, scalable, and fully integrated across the enterprise.

Core Pain Points

- Managing a complex, highly regulated clinical tech stack across multiple systems.
- High ongoing maintenance costs and mounting technical debt from legacy point solutions.
- Limited scalability and high operational risk when attempting to automate complex workflows.

Key Value Drivers

- API-first, cloud-native architecture that integrates seamlessly with existing EDC, CTMS, and ERP systems.
- Embedded GxP, GDPR, and HIPAA compliance with audit-ready controls and enterprise governance.
- Modular SaaS model that enables incremental adoption without requiring disruptive system overhauls.

What She Is Really Asking

"How do I modernize our clinical financial systems without breaking compliance or creating a massive, disruptive integration nightmare?"

The Four Personas You Might Meet at TechIQ

Buyer Persona Profile: Andres - Digital Transformation Leader

Role & Overview

Andres is the Digital Transformation Leader. He is responsible for driving innovation and scaling modern technologies, like AI and automation, across enterprise clinical operations to maximize ROI.

Core Pain Points

- AI pilots and proofs-of-concept that stall before reaching true enterprise production scale.
- Unclear or unquantified business ROI on digital transformation investments.
- Disconnected, siloed AI agents operating without a centralized orchestration framework.

Key Value Drivers

- Serves as the foundational orchestration layer connecting multiple AI agents via APIs and webhooks.
- Native integration with IQVIA's Document Extraction Agent (DeX) for automated CTA and invoice processing.
- Delivers measurable digital ROI, lower total cost of ownership, and robust enterprise governance.

What He Is Really Asking

"Where is the actual proof that AI does more than sit in a sandbox and can deliver scalable, enterprise-wide production outcomes?"

Role Play

You know the four personas. Now put it to work. Tell your instructor which persona you are facing and describe a quick scenario, then ask your instructor to play that stakeholder and coach your discovery questions in a live voice role-play.

MODULE 2

Module 2 — The CTFS Value Proposition

The problem in one sentence: clinical trial financial management is still largely manual, siloed, and disconnected — and that fragmentation costs sponsors up to \$55,000 per day in late-stage trials.

CTFS is the only platform that fixes the whole problem in one place.

Five Modules, One Financial Backbone

GrantPlan Connect

Accurate investigator budgets using 38 million negotiated data points

Contracting

AI-driven CTA authoring and amendment workflows

Forecasting

Adaptive, AI-informed payment prediction

Site Payments

Automated, real-time payments with full site portal visibility

Participant Payments

Full-service global participant stipends and reimbursements

Why Unification Is the Differentiator

- A budget agreed in GrantPlan informs the contract. The contract triggers payment milestones. Forecasting reflects real activity in real time.
- No duplicate data entry. No reconciliation guesswork. No duct tape between point solutions.

The Numbers That Anchor Your Pitch

\$15B

for a hallway conversation

2

Under 75 words

for a five-minute chat

3

Under 150 words

for a formal meeting

Lead with the customer's problem before you name the product — they should be nodding before you say CTFS.

Elevator Pitch Practice — Go Live

Create a pitch for a persona. Get inspired by short, medium or long version you see on the screen and build your own pitch, then practice it.

Deliver your pitch aloud, then ask your instructor for specific feedback on clarity, relevance to that persona, and how well you handled competitive positioning. (Ask the instructor to give you an example)

Short

Clinical trial financial management is broken and siloed, costing sponsors up to fifty-five thousand dollars per day in delays. CTFS unifies budgeting, contracting, forecasting, and payments in one AI-powered platform

Medium

Managing trial finances across disconnected tools creates manual work, payment delays, and cost overruns that drag down execution. IQVIA's Clinical Trial Financial Suite solves this by unifying budgeting, AI-driven contracting, adaptive forecasting, and automated site and participant payments on a single platform. Built on fifteen billion dollars in processed payments, CTFS eliminates manual data handoffs so your teams stop reconciling systems and focus on delivering trials faster

Long

Clinical trial financial management is currently fragmented across separate tools for budgeting, contracting, forecasting, and payments. This lack of shared data creates manual re-entry errors, site dissatisfaction, and delays costing up to fifty-five thousand dollars per day in late-stage trials. The IQVIA Clinical Trial Financial Suite is the only platform that unifies the entire financial lifecycle from budget to payment under one AI-powered backbone. When a budget is set in GrantPlan, it automatically informs contract terms. Signed contract milestones then trigger automated site payments, while adaptive forecasting updates in real time. Backed by thirty-eight million negotiated benchmark data points and over fifteen billion dollars in processed payments, CTFS cuts financial processing time by fifty percent. It provides your organization with an agent-ready orchestration layer that connects seamless workflows across your existing tech stack without disruptive implementations

MODULE 2

Module 3 — CTFS

Contracting Deep Dive

Contracting will be generally available at the end of November. Every person at TechIQ is going to hear about it. You need to own it.

Why CTA Processing Is a Burning Problem

- Contract execution is one of the most manual, error-prone steps in trial start-up. Delays in signing ripple into delayed site activation, delayed payments, and compressed timelines.
- Every persona in the room recognizes this pain — even if they describe it differently.

What CTFS Contracting Actually Does

- Streamlines authoring, exchanging, and amending clinical trial agreements between sites and sponsors.
- Agentic AI ingests CTA terms — not a basic OCR scan, but intelligent models that extract, interpret, and contextualize key terms, payment triggers, and site-specific nuances.
- That data feeds automatically into financial and operational workflows downstream.

How CTFS Contracting Creates Customer Value

Accelerates contract execution and site activation

Reduces manual effort, rework, and process bottlenecks

Enables parallel budget and legal negotiations

Improves governance, visibility, and compliance

Creates a seamless path from budget approval to payment readiness

This Is Not a Standalone Tool

The Business Case in Plain Numbers

- Projected **\$3 million** in annual savings for high-volume sponsors running 100-plus trials per year.
- Assumes **two CTAs per site** and 200 sites per trial.
- That is the **cost** of manual re-entry, errors, and delays — **eliminated**.

Handling The Timing Questions

If a buyer asks: Why commit now when the module just launched?

The rest of the CTFS suite is live and proven.

Contracting completes the end-to-end clinical trial financial workflow.

Early adopters gain input into the product roadmap and get priority on new features.

Contracting Conversation Practice

Challenge yourself by presenting our **Contracting module** to a specific, high-friction persona—such as a **Clinical Operations Director** skeptical about AI accuracy.

Follow these steps with your instructor:

- **Pitch:** Walk through your product explanation aloud, focusing heavily on their specific objections.
- **Review:** Ask your instructor for direct feedback on how effectively you mapped the module to that persona's priorities.
- **Reverse:** Swap roles! Have the instructor deliver the pitch so you can hear a different approach, then debrief together.

MODULE 2

Module 4 — Objections, Qualification, and Follow-Up

The best TechIQ conversation means nothing if it does not go anywhere after the event. This module is about converting great conversations into pipeline.

Four Objections You Will Hear — and How to Answer Them

We already have a system

ask what it does not unify and quantify the cost

AI sounds interesting but we are not ready

point to proven outcomes and the sandbox pilot option

CTFS is new

anchor to \$15 billion processed, 200-plus geographies, 90 percent top-pharma adoption

It is too expensive

reframe with \$55,000 per day in delay costs and \$3 million in projected savings

Never Lead with Features — Lead with Unification

- Point solutions solve one problem and create new integration problems.
- CTFS solves the whole financial lifecycle and eliminates the data handoff friction that point solutions require.
- That is your competitive edge — say it confidently and say it early.

What a Qualified TechIQ Lead Looks Like

Expressed pain around payment delays, contract cycle times, forecasting accuracy, or site dissatisfaction

Openness to a demo or sandbox pilot within 30 days

A named decision-maker or influencer willing to continue the conversation

Budget authority or visibility into the budget process

Capture It Before You Lose It

- After each conversation: note the persona, the stated pain, the qualifying signals, and the agreed next step.
- A 90-second voice memo immediately after the conversation is enough. Do not rely on memory at the end of the day.

Hear It From the Field — The Shift From Friction to Flow

Listen: [Zee Zee Gueddar Podcast](#)

Your 30-Day Follow-Up Plan

- Contact | Follow-Up Action | Target Date
- For each key contact: define the personalized action, the scheduled date, and the milestone you are targeting within 30 days. Reference the specific pain they raised at TechIQ — generic emails get deleted, personalized ones get replies.

Follow up

30-Day Milestone Targets

A scheduled discovery call or demonstration

A defined opportunity in the CRM with agreed qualification

A sandbox pilot invitation accepted

One of these three is your success marker for every TechIQ contact

Build Your Follow-Up Live

Full-Scenario Debrief Build Your Follow-Up Live

Work with your instructor to turn a recent TechIQ conversation into a winning follow-up strategy.

- **Brief Your Instructor:** Outline a specific scenario by sharing the persona, the core objection they raised, and the qualifying signals you detected.
- **Co-Create the Plan:** Work together to build a highly targeted follow-up action for that contact, mapping it directly to our 30-day plan structure.

Quick Confidence Check

Before you walk into TechIQ, take a moment for a private knowledge check. Use it to spot any gaps and close them before the conversations start

A circular inset image on the left side of the slide shows a smiling woman with dark curly hair, wearing a dark blazer and a necklace with a circular pendant. She has her fists clenched in a celebratory gesture.

CONGRATULATIONS

You Are Ready. Now Go Make It Count.

You know the buyers. You know the pitch. You know how to handle the pushback and qualify what matters.

One action to take right now: open your notes and write down the name of one person you expect to see at TechIQ — and decide which persona they are and which pitch version you will lead with.

See you out there.

A large, solid blue circle on the right side of the slide.
