

Creating Unique Value Propositions (UVPs) for CTFS Prospects

Every day of trial delay burns cash. Your UVP must buy days back.

MODULE 1

Why CTFS UVPs win now

- Fragmented finance slows studies
- Delays push launch revenue
- CTFS unifies finance workflows
- UVP equals persona-outcome-proof
- Net value math matters

MODULE 1

Your 1-line CTFS UVP draft

We help [ClinOps/IT/AI Tech/Site] reduce [cycle time] by [X%], cut [disputes/FTE hours] by [\$], and accelerate [time-to-payment/launch] by [days].

MODULE 1

Momentum bridge: what comes next

01

You wrote a UVP draft

02

Next: persona-led discovery

03

Next: quantify delay costs

04

Next: tailor per stakeholder

05

Next: build UVP one-pager

MODULE 1

Three delay costs CTFS reduces

Start-up cycle time days

Site payment cycle days

Dispute and exception hours

Rework and leakage costs

Launch delay lost revenue

MODULE 1

UVP anatomy: make it unique

Persona: who and priority

Outcome: measurable result

Proof: metric or example

Timeframe: when value lands

Avoid feature-first claims

MODULE 1

Core UVP math

Revenue acceleration value	Cost savings value	Risk reduction value
Minus CTFS investment	Net value, ROI, payback	

Quick check: spot what is missing

1

Persona named?

2

Outcome quantified?

3

Proof cited?

MODULE 1

CTFS components that create value

Budgeting and grant planning

Contracting and CTA terms

Forecasting and accruals

Payments and site portal

Audit trails and visibility

MODULE 2

AI-enabled steps in CTFS

- DeX document ingestion
- Automated data validation
- Anomaly and exception detection
- Smart approvals and routing
- Reconciliation and forecasting

MODULE 2

Global scale and open design

Multi-currency and multilingual

Local tax and compliance

Sponsor-agnostic site portal

API-first and webhooks

Lower TCO via consolidation

MODULE 2

End-to-end CTFS finance workflow

Budget set from protocol

CTA terms ingested

Activity verified to terms

Invoice auto-created

Payment executed globally

Forecasts update continuously

MODULE 2

Persona pain points to target

ClinOps: silos, slow cycles

IT: tech debt, integration risk

AI Tech: PoCs, no orchestration

Site Ops: cash flow, chasing

MODULE 2

Practice: map features to outcomes

- Pick five CTFS capabilities
 - For ClinOps: cycle time, satisfaction
 - For IT: TCO, control, fit
 - For AI Tech: scale, ROI
 - For Site Ops: predictability, chases

MODULE 2

Job move: mini messaging stack

01

Named account and persona

02

Top three pains

03

Three CTFS capabilities

04

Three measured outcomes

05

One hypothesis to test

MODULE 2

Knowledge check: feature to outcome

1

Site portal -> fewer disputes

2

APIs -> lower integration risk

3

DeX -> faster document cycles

MODULE 2

What to quantify for UVPs

Cycle times by process

FTE hours by role

Dispute and exception rates

Days to payment at sites

Integration and scope depth

Compliance overhead costs

MODULE 3

Decision drivers by persona

ClinOps: speed, visibility, sites

IT: interoperability, controls, TCO

AI Tech: orchestration scale, ROI

Site Ops: cash flow, admin ease

MODULE 3

Red and green fit signals

Red signals

- | Red: spreadsheets and email
- | Red: high exception rates
- | Red: legacy lock-in

Green signals

- | Green: data access readiness
- | Green: multi-country complexity
- | Green: API maturity

MODULE 3

Top discovery Qs: ClinOps and IT

- ✓ Current cycle time by step?
- ✓ Disputes per month and time?
- ✓ Payment days from visit?
- ✓ Systems to integrate today?
- ✓ Exception rate and root cause?
- ✓ Control and audit priorities?

Top discovery Qs: AI Tech and Site Module 3

Which agents to orchestrate now?

KPIs for digital ROI?

API or webhook constraints?

Site cash flow pain today?

Portal transparency gaps now?

Dispute triggers most common?

Practice: draft a 6-question plan Module 3

01

Choose one target persona

02

Two cycle time or hours

03

Two disputes or DPO/DSO

04

One integration or compliance

05

One delay business impact

Job move: personalize your plan

Module 3

Tailor to named account

Add two follow-up probes

Set one metric validation

Ask for data or SME

Scenario check: strongest questions Module 3

1

Lead with cycle metrics

2

Lead with API controls

3

Lead with site cash flow

UVP calculator: structure and flow Module 4

01

Inputs: times, rates, volumes

02

Compute cost savings

03

Compute dispute reductions

04

Compute revenue acceleration

05

Subtract CTFS investment

06

Outputs: ROI, payback, value

Revenue acceleration from delay avoided Module 4

- 1 Find launch revenue per day
- 2 Estimate days saved
- 3 Multiply for acceleration value
- 4 Use conservative sensitivity
- 5 Tie to persona outcome

Cost savings and TCO math Module 4

Hours saved x loaded rate

By role x volume

Disputes x time x rate

Licenses and support avoided

No-code config reduces effort

Risk reduction and accuracy gains Module 4

Anomaly detection reduces leakage

Fewer exceptions lower rework

Audit trails reduce findings

Improved forecast accuracy

Include as risk value

Translate numbers to one sentence Module 4

01

Name persona and metric

02

State value and timeframe

03

Anchor with one proof

04

Keep outcome before feature

05

Example: 90-day result

Practice: run a calculator scenario Module 4

01

Enter times, rates, volumes

03

Add CTFS subscription

05

Write your 1-line UVP

02

Enter disputes and days

04

Review ROI and payback

Assumptions to confirm in discovery Module 4

Launch daily revenue or margin

Loaded hourly rates by role

Dispute volumes and time

Payment cycle and dispute rate

Integration scope and systems

Calculation check Module 4

Hours saved x rate x roles

Days saved x launch rev/day

Best 1-line UVP translation

Tailor UVPs per stakeholder Module 5

ClinOps: cycle time, visibility

IT: TCO, controls, API-first

AI Tech: orchestration, ROI

Site Ops: predictability, clarity

Match proof to priority

Objections and responses

Module 5

Point tools already? Unify workflow

Integration risk? API-first proof

Compliance concerns? Audit controls

Change burden? Phased rollout

Competitive frame: unified, open

Practice: 60-second UVP delivery Module 5

01

Choose one persona

02

Deliver quantified UVP

03

Add one proof point

04

State one validation ask

05

Handle one objection

One-pager and readiness check

Module 5

Finalize persona message

Quantified value and payback

Three validation asks

Self-score clarity and proof

Choose next step
