

CTFS for Account Executives: From Discovery to Deal

What separates the AEs who advance CTFS deals from those who stall on a second call? By the end of this session you will know exactly what to say, to whom, and why it moves the deal forward.

What We Are Covering Today

Four modules — 75 minutes — one goal: a confident CTFS conversation from first discovery to sandbox commit

01

Module 1

The market problem and the platform

02

Module 2

The four buyers — pain, proof, and pitch

03

Module 3

Building your quantified value proposition

04

Module 4

Discovery, objections, and closing to the next step

The Problem Every Buyer Feels

Clinical trial financial management is broken into pieces — budgeting, contracting, forecasting, and payments running in separate tools with no shared data

The result: manual work, poor visibility, missed milestones, and spiraling costs

This is not a niche pain — every persona in your buying committee feels a version of it

The Stakes Are Rising

49%

Growth in trial sites
since 2019

60%

Increase in protocol amendments

\$55K

Per day
Late-stage trial delays cost sponsors up to
\$55,000 per day

These numbers create urgency — use them to open discovery, not just to close

What CTFS Is — In One Sentence

CTFS unifies budgeting, contracting, forecasting, site payments, and participant payments in one AI-powered platform with shared data and end-to-end workflows

SaaS, outsourced tech-enabled services, or hybrid — match the model to what the buyer actually needs

The Five Modules

1

GrantPlan

Investigator grant budgeting with 38 million negotiated data points

2

Contracting

AI-driven CTA ingestion and configurable workflow

3

Forecasting

Predictive, adaptive site payment modeling

4

Site Payments

End-to-end automation with real-time portal visibility

5

Participant Payments

Global, compliant, full-service reimbursement

Watch the two-minute platform overview

Watch: [**IQVIA Clinical Trial Financial Suite**](#)

After the video your instructor will take any questions before we move into the buyer personas

Proof Points to Memorize

\$15B+
in payments processed

200+
geographies

510,000+
budgets delivered

90%
of top 20 pharma companies use our technology for clinical
trial financial management

58% of sponsor executives already use our technologies for this purpose — Frost and Sullivan, May 2025

Module 2 — The Four Buyers

Knowing the platform is not enough — you need to know whose problem you are solving the moment they walk in the room

Gilbert, Reena, Andres, and Rachel each have a distinct pain, a distinct proof point, and a distinct pitch

Get this wrong and you are speaking to the room, not to the person who can move the deal

Gilbert — Clinical Operations Director

Pain

Fragmented financial visibility, slow trial execution, site dissatisfaction

Value Drivers

End-to-end platform, global and multicurrency readiness, AI-powered document processing

Proof Points

50% reduction in financial processing time — \$3M annual savings for high-volume sponsors via AI-powered CTA processing

One-sentence pitch

CTFS gives you a single platform from grant to payment, so your teams stop reconciling systems and start running trials — *Copy this card into your CRM or email prep*

Reena — VP IT Clinical

Pain

Complex regulated tech stack, high maintenance cost, limited automation scalability

Value Drivers

API-first cloud-native architecture, GxP, GDPR, and HIPAA compliance, standards-based integration with EDC, CTMS, and ERP, modular SaaS that cuts tech debt

Proof Points

No-code configuration, extensible webhook framework, audit-ready controls

One-sentence pitch

CTFS is an agent-ready orchestration layer that plugs into your existing stack without a disruptive implementation — *Copy this card into your CRM or email prep*

Andres — Digital Transformation Leader

Pain

AI pilots that stall before enterprise scale, unclear ROI, siloed agents with no orchestration layer

Value Drivers

CTFS as the orchestration infrastructure connecting multiple AI agents through APIs and webhooks — including IQVIA's Document Extraction Agent for CTA and invoice ingestion

Proof Points

Measurable KPIs for digital ROI, lower total cost of ownership, cross-agent coordination with enterprise governance

One-sentence pitch

CTFS is not another pilot — it is the infrastructure that makes your pilots scalable — *Copy this card into your CRM or email prep*

Rachel — Site Operations Director

Pain

Unpredictable cash flow, manual invoicing, payment disputes, chasing sponsors across studies

Value Drivers

Automated invoice creation mapped to CTA terms, real-time payment visibility through a sponsor-agnostic portal, fewer disputes, faster cycle times

Proof Point

University of Chile Phase III — 8,000 visits managed, dramatically faster payments

Sergio Vargas Serrano, Site Manager: "IQVIA's clinical trial financial management software made everything about managing payments easy."

One-sentence pitch

CTFS gives your site predictable payments and real-time visibility without adding admin overhead — *Copy this card into your CRM or email prep*

A Note on Agentic AI — What It Means for Your Buyers

Agentic AI means software that perceives data, takes action, and completes multi-step workflows without a human triggering each step

For Reena

Fewer exceptions to handle manually

For Andres

Proof that AI is operational, not experimental

Keep it this plain — if you overcomplicate the definition you lose both buyers

When Multiple Personas Are in the Room

Open with the shared pain: fragmentation and the cost of delay

Then branch to individual value drivers as the conversation develops

Identifying who is in the buying committee is a discovery priority — ask early who owns financial systems, who approves technology decisions, and who represents site operations

Persona Role-Play — Practice Before Your Next Call

You have four persona cards in front of you

Pick one buyer, tell your instructor which persona you want to practice, and they will play that buyer in a two-to-three minute discovery conversation

Surface the pain, introduce CTFS, and land at least one proof point before the scene wraps

 Ask your instructor to run the persona role-play when you are ready

Module 3 — The Quantified Value Proposition

A feature pitch gets you a second meeting — a number the prospect can defend internally gets you a deal

Every CTFS conversation should produce a specific dollar figure using the Total Net Value framework

This is the skill that separates a confident AE from one who is still selling on product

The Total Net Value Formula

Total Net Value equals Revenue Uplift plus Cost Savings minus Solution Cost

Three pillars — every CTFS pitch should produce a number the prospect can defend internally

Pillar 1 — Revenue Uplift

Late-stage delay costs \$55K per day —
a 10-day acceleration is worth \$550K

Pillar 2 — Cost Reduction

Hours saved on manual processing
multiplied by hourly rate multiplied by
staff affected — add cost of point
solutions replaced

Pillar 3 — Risk Mitigation

Monthly revenue multiplied by delay or
downtime percentage — compliance
failures and payment disputes have
dollar values

Open the UVP Calculator and enter your prospect's numbers

It computes Total Net Value and writes your one-sentence pitch for you

Open: <https://esource-course-developer.vercel.app/uvp-calculator.html>

The delay cost defaults to \$55,000 per day from IQVIA's own materials — adjustable, or set it to zero

Competitive Framing Inside the UVP

GreenPhire comes up

Acknowledge it, then shift scope —
GreenPhire is a payment point solution, CTFS covers the entire financial lifecycle with shared data, fewer reconciliation errors, and fewer vendor contracts

Medidata comes up

Open modular architecture versus a locked ecosystem, plus three innovation releases per year versus a fixed roadmap

GrantPlan differentiator no competitor can match

38 million negotiated data points — the largest benchmark dataset in the industry

Roadmap as Competitive Advantage

Participant concierge tools and contract automation arrive in 2H 2026

Early adopters get three annual innovation releases and direct input into the product roadmap

Position this as a strategic advantage — they are shaping the financial backbone of modern trials, not just buying a tool

Open the calculator again — this time with a real account from your pipeline in mind

Open: <https://esource-course-developer.vercel.app/uvp-calculator.html>

Enter your numbers, then tell your instructor the Total Net Value you got

Your instructor will pressure-test your assumptions and help you polish the one-sentence pitch

Ask your instructor to review your UVP when you are ready

Module 4 — Discovery, Objections, and the Next Step

You know the platform, the personas, and the math

Now we sharpen the live deal conversation — from your first question to a committed next step

Most deals stall here, not because the product is wrong, but because the AE did not handle resistance confidently

Discovery Priority One

Before you choose a message track, identify who is in the buying committee

Ask: who owns financial systems — who signs off on technology decisions — who represents site operations in this conversation

If you skip this step and pitch to the wrong person first, you will spend two meetings recovering

The Three Objections You Will Face

Stalled POC — Andres

"We already tried an AI pilot and it did not scale."

Counter: did that pilot have an enterprise orchestration layer connecting it to existing systems? CTFS is the infrastructure that makes pilots scalable — APIs, webhooks, cross-agent coordination built in.

Integration concern — Reena

"Our tech stack is complex and we cannot afford disruption."

Counter: API-first design, no-code configuration, standards-based interoperability, start with Site Payments without replacing anything.

Incumbent competitor — GreenPhire

Acknowledge the relationship, then shift scope — CTFS unifies the entire financial lifecycle, not just payments, with shared data and fewer vendor contracts.

The Sandbox Is the Right Next Step for Almost Every Buyer

Q4 2025 sandbox — no production data, low risk, early-adopter input into the roadmap

For Andres

A pilot that actually proves enterprise scale

For Reena

An architecture review in a safe environment

For Gilbert

Site Payments against real workflow scenarios

For Rachel

The fastest path to predictable payments with zero disruption to running studies

Always leave the conversation with a defined next step — the sandbox or a demo integrating the Document Extraction Agent for transformation-oriented buyers

Closing the Conversation

Reinforce market direction: 58% of sponsor executives already use our technologies — Frost and Sullivan, May 2025 — the market has made a directional choice

Name the next step explicitly: sandbox access, a demo, or an architecture review — and confirm who needs to be in the room

Do not leave without a date

Objection Drill — Practice the Hard Conversations

Choose your scenario: stalled POC, integration concern, or incumbent competitor

Tell your instructor which one you want to work, and they will play the skeptical buyer

Handle the objection, then close toward the sandbox next step

Ask your instructor to start the objection drill when you are ready

Optional Knowledge Check

A private two-minute confidence check is available — nothing is recorded, nothing is shared

Use it to confirm you can recall the proof points, persona pain points, and UVP formula before your next live deal conversation

Your instructor can walk you through it when you are ready

You Are Ready — Here Is Your Next Action

You can now run a persona-aware discovery conversation, build a quantified value proposition, handle the common objections, and close to the sandbox pilot

Your next action: identify one account in your pipeline, map the buyer to a persona, and open the discovery conversation this week

Your instructor is here if you want to run one more practice round before you go. Keep the calculator: <https://esource-course-developer.vercel.app/uvp-calculator.html>
