

TECHIQ 2026

Are You Ready to Walk Into TechIQ and Win?

In the next 60 minutes you will know your buyers, own your pitch, and leave with a plan to follow up every conversation with confidence.

What You Will Walk Away With

- Recognize the four buyer personas instantly
- Deliver a sharp CTFS pitch — short, medium, or long version
- Go deep on the brand-new Contracting module
- Handle objections without flinching
- Leave TechIQ with a 30-day follow-up plan in hand

First — Watch the CTFS Overview

Before we dive in, take two minutes to see the platform in action. This frames everything we cover in the next hour.

Watch: [CTFS OVERVIEW](#)

Module 1 — Know Your Buyer

Clinical trial financial pain is shared across the organization — but every stakeholder feels it differently. Speak to the right pain and you have their attention. Miss it and you are just another vendor.

The Four Personas You Will Meet at TechIQ

Gilbert — Clinical Operations Director

wants speed, site satisfaction, and fewer manual processes

Reena — VP IT Clinical

wants secure integration, audit-ready governance, no new tech debt

Andres — Digital Transformation Leader

wants AI ROI that goes beyond pilots and actually scales

Rachel — Site ClinOps Director

wants predictable cash flow and fewer payment disputes

What Each Stakeholder Is Really Asking

Gilbert

Why are my sites frustrated and how do I fix payment cycle times?

Reena

How do I modernize without breaking compliance or creating new integration nightmares?

Andres

Where is the proof that AI does more than sit in a sandbox?

Rachel

When will I stop chasing sponsors for payment updates?

The Discovery Questions That Open Doors

For Gilbert

How are payment delays affecting your site relationships right now?

For Reena

What keeps you up at night from a compliance risk standpoint?

For Andres

Where are your current AI investments stalling before they reach production?

Lead with their world — not your product.

Persona Drill — Practice Live

You know the four personas. Now put it to work. Tell your instructor which persona you are facing and describe a quick scenario, then ask your instructor to play that stakeholder and coach your discovery questions in a live voice role-play.

Module 2 — The CTFS Value Proposition

The problem in one sentence: clinical trial financial management is still largely manual, siloed, and disconnected — and that fragmentation costs sponsors up to \$55,000 per day in late-stage trials.

CTFS is the only platform that fixes the whole problem in one place.

Five Modules, One Financial Backbone

01

GrantPlan

accurate investigator budgets using 38 million negotiated data points

02

Contracting

AI-driven CTA authoring and amendment workflows

03

Forecasting

adaptive, AI-informed payment prediction

04

Site Payments

automated, real-time payments with full site portal visibility

05

Participant Payments

full-service global participant stipends and reimbursements

Why Unification Is the Differentiator

A budget agreed in GrantPlan informs the contract. The contract triggers payment milestones. Forecasting reflects real activity in real time.

No duplicate data entry. No reconciliation guesswork. No duct tape between point solutions.

The Numbers That Anchor Your Pitch

\$15B

in payments processed

200+

geographies supported

90%

of top 20 pharma use IQVIA for clinical
trial financial management

50%

projected reduction in financial
processing time

\$3M

projected annual savings for high-volume
sponsors

Know Which Pitch Fits the Moment

1

Under 35 words
for a hallway conversation

2

Under 75 words
for a five-minute chat

3

Under 150 words
for a formal meeting

Lead with the customer's problem before you name the product — they should be nodding before you say CTFS.

Elevator Pitch Practice

— Go Live

Pick your persona. Pick your version — short, medium, or long. Deliver your pitch aloud, then ask your instructor for specific feedback on clarity, relevance to that persona, and how well you handled competitive positioning. (Ask the instructor to give you an example)

Module 3 — CTFS

Contracting Deep Dive

Contracting reaches general availability at the end of November. Every person at TechIQ is going to hear about it. You need to own it.

Why CTA Processing Is a Burning Problem

Contract execution is one of the most manual, error-prone steps in trial start-up. Delays in signing ripple into delayed site activation, delayed payments, and compressed timelines.

Every persona in the room recognizes this pain — even if they describe it differently.

What CTFS Contracting Actually Does

Streamlines authoring, exchanging, and amending clinical trial agreements between sites and sponsors.

Agentic AI ingests CTA terms — not a basic OCR scan, but intelligent models that extract, interpret, and contextualize key terms, payment triggers, and site-specific nuances.

That data feeds automatically into financial and operational workflows downstream.

This Is Not a Standalone Tool

A signed CTA automatically informs payment milestones in Site Payments.

Budget alignment in GrantPlan updates without manual re-entry.

Contracting is the upstream trigger that makes the rest of the financial lifecycle accurate and automated.

The Business Case in Plain Numbers

Projected \$3 million in annual savings for high-volume sponsors running 100-plus trials per year.

Assumes two CTAs per site and 200 sites per trial.

That is the cost of manual re-entry, errors, and delays — eliminated.

A woman with dark hair tied back, wearing a grey blazer over a white shirt, is seated at a wooden conference table. She is looking off-camera with a thoughtful expression. In front of her is a clipboard with papers and a pen. Other people are blurred in the background, suggesting a meeting environment.

Handling the Timing Question

If a buyer asks: why commit now when the module just launched?

- The rest of the CTFS suite is live and proven.
- Contracting completes the upstream coverage.
- Early adopters gain input into the product roadmap and get priority priority on new features.

Contracting Conversation Practice

Tell your instructor you want to practice explaining the Contracting module to a specific persona — for example, a clinical ops director who is skeptical about AI accuracy. Walk through your explanation aloud, then ask your instructor for feedback on how well you connected the module to that persona's priorities.

Try swapping roles with the instructor...

Module 4 — Objections, Qualification, and Follow-Up

The best TechIQ conversation means nothing if it does not go anywhere after the event. This module is about converting great conversations into pipeline.

Four Objections You Will Hear — and How to Answer Them

We already have a system

ask what it does not unify and quantify the cost of that gap

AI sounds interesting but we are not ready

point to proven outcomes and the sandbox pilot option

CTFS is new

anchor to \$15 billion processed, 200-plus geographies, 90 percent top-pharma adoption

It is too expensive

reframe with \$55,000 per day in delay costs and \$3 million in projected savings

Never Lead with Features — Lead with Unification

Point solutions solve one problem and create new integration problems.

CTFS solves the whole financial lifecycle and eliminates the data handoff friction that point solutions require.

That is your competitive edge — say it confidently and say it early.

What a Qualified TechIQ Lead Looks Like

- Expressed pain around payment delays, contract cycle times, forecasting accuracy, or site dissatisfaction
- A named decision-maker or influencer willing to continue the conversation
- Openness to a demo or sandbox pilot within 30 days
- Budget authority or visibility into the budget process

Capture It Before You Lose It

After each conversation: note the persona, the stated pain, the qualifying signals, and the agreed next step.

A 90-second voice memo immediately after the conversation is enough. Do not rely on memory at the end of the day.

Hear It From the Field — The Shift From Friction to Flow

Listen: [Zahiah "Zee Zee" Gueddar Podcast](#)

Your 30-Day Follow-Up Plan

Contact | Follow-Up Action | Target Date

For each key contact: define the personalized action, the scheduled date, and the milestone you are targeting within 30 days. Reference the specific pain they raised at TechIQ — generic emails get deleted, personalized ones get replies.

30-Day Milestone Targets

A scheduled discovery call or demonstration

A defined opportunity in the CRM with agreed qualification criteria

A sandbox pilot invitation accepted

One of these three is your success marker for every TechIQ contact.

CLOSING

Full-Scenario Debrief Build Your Follow-Up Live

Tell your instructor a brief TechIQ conversation scenario — the persona, the objection raised, and the qualifying signals you observed. Then ask your instructor to help you build your follow-up action for that contact using the 30-day plan structure.

KNOWLEDGE CHECK

Optional — Quick Confidence Check

Before you walk into TechIQ, take a moment for a private, optional knowledge check. Use it to spot any gaps and close them before the conversations start.

CONGRATULATIONS

You Are Ready. Now Go Make It Count.

You know the buyers. You know the pitch. You know how to handle the pushback and qualify what matters.

One action to take right now: open your notes and write down the name of one person you expect to see at TechIQ — and decide which persona they are and which pitch version you will lead with.

See you out there.
