

Selling the IQVIA Clinical Trial Financial Suite

Clinical trial financial solutions

Sales Enablement rollout training

75–90 minutes

For experienced new professionals

Why CTFS Sales Enablement Matters

- Clinical trials are increasingly complex
- Global operations create financial challenges
- Fragmented processes slow study execution
- Manual work increases operational costs
- Effective selling connects problems to value

Course Learning Objectives

1

Explain the CTFS business context

2

Understand customer personas

3

Analyze current-state costs

4

Demonstrate CTFS value conversations

5

Utilize the UVP Calculator

Course Road Map

1

Module 1

Introduction to CTFS

2

Module 2

Understanding Customer Personas

3

Module 3

Analyzing Cost And Opportunity

4

Module 4

Utilizing the UVP Calculator

Watch: CTFS Overview

Build context before deeper selling

Note customer problems and outcomes

Intro video: <https://vimeo.com/1211116806/987aa02555>

Focus on platform-level value

Capture questions for later

Clinical Trial Complexity Is Growing

49%

Growth in trial sites

60%

Increase in protocol amendments

- More countries create operational complexity
- More stakeholders require greater coordination
- Financial processes must scale accordingly

The Current-State Challenge

Manual data entry creates rework

Siloed tools limit visibility

Email obscures process ownership

Payment disputes strain site relationships

Delays increase study execution risk

Module 1 — Introduction to CTFS

Unified clinical trial financial platform

Intelligent, automated financial workflows

Global capabilities for complex studies

Modular architecture supports future growth

APIs enable enterprise integration

CTFS Value Proposition

01

Clarify financial operations

02

Control fragmented workflows

03

Accelerate financial processing

04

Improve site experiences

05

Demonstrate measurable operational value

CTFS Platform Capabilities

Budgeting with benchmarked data

Contracting across study stakeholders

Forecasting for financial planning

Site payments and invoice validation

Participant payments and reimbursements

AI-enabled workflow orchestration

CTFS GrantPlan

Uses fair-market-value data

Supports evidence-based budgeting

Ingests protocol information automatically

Improves budget negotiation confidence

Provides historical agreement visibility

CTFS Site Payments

Automates invoice creation

Validates invoices against CTA terms

Provides payment-status visibility

Reduces manual reconciliation

Supports consistent site experiences

CTFS Architecture And Innovation

Agent-ready platform foundation

APIs and webhooks support extensibility

Orchestrates multiple AI workflows

Enables governance and transparency

Reduces system redundancy

Case Study — Fragmented Payments

Scenario Details

- Global Phase III study
- High-enrolling site
- Manual invoice preparation
- Email-based payment follow-up
- Limited discrepancy visibility

Consider: Which CTFS capabilities address these issues?

Module 2 — Understanding Customer Personas

- Different roles define different value
- Start with responsibilities and priorities
- Connect problems to relevant capabilities
- Adapt language to stakeholder concerns
- Avoid one-size-fits-all messaging

Rachel — Clinical Operations Director

Prioritizes execution and predictability

Needs fewer payment disputes

Values site relationship quality

Requires clear financial visibility

Responds to reduced administrative burden

Andrés — Digital Transformation Leader

Prioritizes scalable digital innovation

Needs measurable transformation outcomes

Values agentic AI orchestration

Requires extensible enterprise architecture

Focuses on long-term platform value

Reena — VP IT Clinical

Prioritizes integration and governance

Needs secure, scalable infrastructure

Values APIs and interoperability

Requires audit-ready controls

Focuses on total cost ownership

Persona Activity — Match The Message

01

Identify the stakeholder's priorities

02

Select the relevant CTFS capability

03

Define the expected business outcome

04

Write one discovery question

05

Prepare a persona-specific opening

Module 3 — Analyzing Cost And Opportunity

- Investigate current-state processes
- Quantify administrative effort
- Identify delays and rework
- Examine risk and compliance exposure
- Surface lost strategic opportunity

Four Sources Of Customer Impact

Labor and administrative costs

Delays and cycle-time costs

Risk and compliance costs

Lost capacity and opportunity

Analyze Labor And Administrative Cost

- Invoice preparation hours
- Manual data-entry effort
- Payment-status follow-ups
- Discrepancy investigation time
- Reconciliation and rework

Analyze Delays And Risk

Contracting cycle-time delays

Invoice approval bottlenecks

Payment aging and disputes

Incomplete audit trails

Incorrect currency or tax
treatment

Analyze Lost Opportunity

Delayed study milestones

Reduced site satisfaction

Slower operational scaling

Higher staffing requirements

Less time for strategic work

Current-State Analysis Framework

Case Study — Quantifying Payment Work

Scenario Details

- 120 global study sites
- Recurring invoice review required
- Manual validation against CTA terms
- Frequent payment-status inquiries
- Lean clinical finance team

Analyze: What should the team quantify?

Evidence Before Value Claims

- Separate facts from assumptions
- Validate customer-provided metrics
- Label benchmarks clearly
- Avoid unsupported financial promises
- Document calculation inputs

Module 4 — Utilizing The UVP Calculator

01

Convert customer data into value

02

Combine financial and operational impact

03

Quantify savings and opportunity

04

Create a concise customer message

05

Prepare a credible sales conversation

UVP Value Framework

Revenue uplift

Cost savings

Time savings

Risk or downtime reduction

Solution cost

Total net value

Core UVP Formula

Total Net Value

Revenue uplift plus cost savings

Less solution cost

Use prospect-specific inputs

Validate assumptions with customers

 **Formula:** Total Net Value = Revenue Uplift + Cost Savings – Solution Cost

Labor Savings Framework

Hours saved

Average hourly rate

Number of employees

Annualized working period

Estimated labor savings

 **Formula:** Hours Saved × Hourly Rate × Employees

Open The UVP Calculator

01

Use a real or sample prospect

02

Enter revenue-impact assumptions

03

Add cost and time savings

04

Include risk or downtime impact

05

Review generated value statement

UVP Calculator: <https://esource-course-developer.vercel.app/uvp-calculator.html>

UVP Calculator Activity

01

Select a target CTFS persona

03

Estimate measurable impact

05

Refine unsupported assumptions

02

Enter current-state process data

04

Review total net value

06

Generate a one-sentence UVP

UVP Message Structure

1

Name the target persona

2

Identify the customer problem

3

State the measurable outcome

4

Connect the relevant CTFS capability

Describe the strategic benefit

Sample CTFS UVP

For clinical operations leaders

CTFS reduces payment administration

It improves site payment visibility

It supports scalable global operations

It helps reduce disputes and delays

Final Demonstration — Two-Minute Pitch

01

Describe the current-state challenge

02

Explain the business consequence

03

Position the relevant CTFS capability

04

Share quantified customer value

05

Recommend a logical next step

Final Assessment Criteria

Accurate CTFS understanding

Relevant persona alignment

Evidence-based analysis

Appropriate value quantification

Clear and empathetic communication

Required Checklist Review

- ☐ Understand customer personas
- ☐ Understand CTFS modules
- ☐ Analyze cost and lost opportunity
- ☐ Utilize the UVP Calculator
- ☐ Demonstrate value-based CTFS selling

Key Takeaways

- Complexity increases financial pressure
- Personas shape effective conversations
- Current-state analysis reveals value
- CTFS connects workflows and outcomes
- Quantified UVPs strengthen sales engagement

Closing Reflection

Which persona needs more practice?

Which CTFS module needs reinforcement?

Which metric will you validate first?

How will you improve your pitch?
