

Are You Ready for Every Conversation at TechIQ?

The right stakeholder. The right message. The right next step. This course gets you there in 60 minutes.

What You Will Walk Away With

- Recognize who is in the room and what they care about
- Deliver a confident, compelling CTFS pitch
- Handle objections with value-based responses
- Qualify real opportunities on the spot
- Leave with a documented 30-day follow-up plan

The Pressure Your Buyers Are Feeling

49%

More trial sites since 2019

60%

More protocol amendments

Expanding global footprint — and financial operations that have not kept up

This is the pain driving every conversation at TechIQ

Four People Who Show Up in CTFS Deals

Gilbert — Clinical Operations Director

Faster trials, less fragmentation, better sites

Reena — VP IT Clinical

Interoperability, compliance, lower tech debt

Andres — Digital Transformation Leader

Measurable AI ROI, scalable orchestration

Rachel — Site Operations Leader

Predictable cash flow, fewer payment disputes

Know which one you are talking to before you pitch

Lead With Their Priority, Not Your Product

Gilbert

Ask about payment cycle times and site satisfaction scores

Reena

Ask about existing systems and compliance obligations

Andres

Ask about AI initiatives stalled at proof-of-concept

Rachel

Ask about invoice disputes and time spent chasing payments

The right question opens the door — the wrong one closes it

Persona Identification Drill

You have real conversations coming up at TechIQ. Let's make sure you are ready for them.

Ask your instructor to run the persona identification drill with you — describe a prospect you expect to meet and your instructor will identify which persona they most resemble and suggest two opening discovery questions tailored to that profile

What CTFS Is — the One-Sentence Foundation

CTFS is IQVIA's Clinical Trial Financial Suite: a unified, AI-powered platform that orchestrates budgeting, contracting, forecasting, site payments and participant payments in a single ecosystem — eliminating the fragmented point solutions that slow trials down

Watch Before We Go Deeper

Two minutes. Frames the whole suite visually.

Watch: <https://vimeo.com/121116806/987aa02555>

The Unification Story Is the Win

Point solutions handle one function — GreenPhire, Medidata, others

CTFS connects shared data and workflows across the full financial lifecycle

That end-to-end visibility is what no single point tool can provide

This is the core differentiator — use it every time

A Platform Built on Proven Scale

90%

Of top 20 pharma companies use IQVIA for clinical trial financial management

\$15B

In payments processed across 200-plus geographies

50%

Projected reduction in financial processing time

\$3M

Annual savings for high-volume sponsors

CTFS Site Payments is live first — with projected outcomes of 50% reduction in financial processing time and \$3M annual savings for high-volume sponsors

You are selling a platform with a proven foundation, not a startup promise

The Agentic AI Story — Use It With the Right Persona

CTFS orchestrates multiple AI agents through APIs and webhooks

Document extraction, anomaly detection, forecasting, reconciliation — all connected

Not a point tool — an extensible platform that grows with the customer

Lead with this for Andres and Reena; hold it for Gilbert and Rachel

Build a Quantified Value Proposition

Generic pitches lose. Numbers win.

Open the IQVIA UVP Calculator and build a one-sentence value proposition using your prospect's own numbers for revenue uplift, cost savings and risk reduction.

Pitch Practice With Your Instructor

Short version

35 words or fewer — for hallway conversations

Medium version

75 words — for seated meetings

Be comfortable with both before you walk into TechIQ

Ask your instructor to coach you through your elevator pitch — deliver your chosen version out loud and your instructor will give you real-time feedback on clarity, confidence and how well you landed the differentiators

The Three Objections You Will Hear at TechIQ

1

We already use GreenPhire or Medidata

2

We are not ready for agentic AI

3

This sounds hard to implement

Each one has a value-based answer — and none of them should stop the conversation

Responding to Incumbent Loyalty

Acknowledge the relationship — do not argue with it

Then pivot: point solutions handle one function; CTFS connects them all

The question to ask: what is the fragmentation costing you today in duplicated effort and lost visibility?

Unification is the gap no incumbent fills

Responding to AI Skepticism and Complexity Concerns

AI Skepticism

CTFS meets them where they are — modular SaaS, no-code configuration, sandbox release for early adopters before any commitment

Implementation Concern

Flexible deployment — SaaS, Tech-Enabled Services or hybrid — integrates with existing EDC, CTMS and ERP through open APIs

Always return to the same anchor: what is this costing you today? At Phase 3, a delayed trial runs \$55,000 per day

Qualifying a Real Opportunity

Four signals that tell you this conversation is worth advancing

01

Known pain in budgeting, contracting, forecasting or payments

02

A stakeholder with authority in the room

03

A near-term trigger — new study, vendor renewal, digital transformation mandate

04

Openness to a next step

If you have all four, you have a qualified opportunity

Capture It Before You Walk Away

- Stakeholder name and role
- The pain they described — in their words
- Any number they gave you — time, cost, frequency
- The next step they agreed to

Do this in the moment, not later

Objection Role-Play With Your Instructor

The best way to get sharp is to practice out loud.

Ask your instructor to run an objection role-play with you — tell your instructor which objection you want to practice, your instructor will play the prospect, then give you feedback on how well you anchored your response in value

Not Every Business Card Is an Opportunity

The goal at TechIQ is not a long list of contacts with no context

It is a small number of well-qualified prospects with a clear action for each one

Quality of follow-up determines whether a conversation becomes pipeline

Discipline now saves time — and wins deals — later

Document Four Things Before You Leave Each Conversation

Who they are and their persona

The specific pain or interest they expressed

What you committed to send or do next

The date by which you will do it

These four things are your follow-up plan

Make the Next Step Specific and Near-Term

- Personalized email referencing the exact challenge they described — within 48 hours
- Demo request submitted before you leave the event
- ROI calculation built with the UVP Calculator and sent with context
- Calendar invite for a discovery call with their wider team

Specific beats generic every time

Personalize Every Follow-Up to the Persona

Gilbert

Gets trial speed and site satisfaction outcomes

Reena

Gets integration architecture and compliance

Andres

Gets the agentic AI and measurable ROI story

Rachel

Gets payment transparency and faster cycle times

One message does not work for all four — use what you learned in Module 1

Schedule It at the Event — Do Not Promise to Follow Up Later

The 30-day window is critical — structured follow-up in that window advances opportunities; generic check-ins do not

Where possible, agree on a date and send the calendar invite before the conversation ends

The best follow-up plan is the one the prospect already knows about

Build Your 30-Day Plan With Your Instructor

You have the conversations coming. Let's map the follow-through.

Ask your instructor to help you build your follow-up plan — describe one real or realistic TechIQ contact out loud, including their persona, the pain they mentioned and what you committed to, and your instructor will help you shape a specific 30-day action sequence for that contact

Build Your 30-Day Plan With Your Instructor

You have the conversations coming. Let's map the follow-through.

Ask your instructor to help you build your follow-up plan — describe one real or realistic TechIQ contact out loud, including their persona, the pain they mentioned and what you committed to, and your instructor will help you shape a specific 30-day action sequence for that contact

You Are Ready — Here Is Your One Next Step

Thank you for completing Introduction to CTFS for TechIQ.

Before your first conversation at the conference: open the UVP Calculator, pick one prospect you expect to meet, and build their value proposition now.

Walk in with the number ready — not the idea.
