

From Discovery to Deal

If you walked into a prospect call tomorrow, could you qualify them, run the discovery, and deliver a value number — in one conversation? That is exactly what this course builds.

What You Will Be Able to Do

By the end of this session you will:

Spot a high-fit ESource prospect fast

Run a structured discovery conversation

Match ESource solutions to real client needs

Build and say a prospect-specific value proposition

The ESource Portfolio — Two Brands, One Story

ESource Corp

L&D consulting and staffing — 30 years
in the field

ESource AI University

AI courses, deployable chatbots, and
implementation strategy

ESource AI Group

EntrainOS enterprise intelligence —
refer complex inquiries to an SME

Knowing all three lets you listen for fit instead of pitching at random

ESource Corp — Four Client Situations

01

New product or service launch needing training support

02

Staffing and talent acquisition for L&D teams

03

LMS consolidation, technology upgrades, or AI implementation

04

Mergers and acquisitions requiring document integration and change management

ESource AI University — Three Things They Buy

AI curriculum from prompt engineering to chatbot development

Immediately deployable chatbots starting at \$49 per month

Implementation strategy including change management and data security

The Flagship — L&D Expert Assistant

Full ILT package

Outline, facilitator guide, workbook, slide deck — in under ten minutes

E-learning produced in minutes, not days

SCORM and xAPI export

For enterprise LMS deployment

Benchmark claim

Up to 99.98% faster than standard development workflows

Portfolio Tour and Recall Check

Your instructor is about to give you a quick verbal tour of the full portfolio and follow up with a few snap questions to test your recall.

Ask your instructor to start the portfolio tour when you are ready.

What Is a High-Fit Prospect?

Fit is not about industry — ESource serves clients across verticals

Fit is about the client's current organizational moment

The right question: does their situation right now map to an ESource capability?

Green-Light Signals — ESource Corp

Launching a new product or service with no internal training bandwidth

Hiring or scaling an L&D team and frustrated with resume volume

Consolidating an LMS or exploring AI without implementation expertise

Going through a merger or acquisition and needing change management support

Green-Light Signals — ESource AI University

Wants to upskill employees or an L&D team in AI

Needs a chatbot deployed quickly without custom development

Behind competitors on AI adoption with executive pressure to catch up

When to Qualify Out

Disqualifying Signals

- Fully staffed, mature L&D team
- No current initiative on the table
- No open budget cycle
- No AI pressure from leadership

Qualify out early — move them to nurture and spend your time on green fits

The Two-Minute Fit Check

Three questions you can ask in any opener:

“

"What is your team working on right now that keeps you up at night?"

”

“

"Have you had any pressure from leadership to do something with AI?"

”

“

"Are you fully staffed on the L&D side today?"

”

The answers tell you whether to keep going or move on

Fit Assessment — Your Prospect

Think of a real or hypothetical prospect you are considering right now.

Tell your instructor who they are and what you know about their situation, and ask for a green, yellow, or red fit assessment based on the signals from this module.

Discovery — Listen First, Pitch Second

Your goal in the first conversation is to understand the client's world well enough to recommend with confidence

Consultative discovery means you resist the urge to pitch the moment you hear a familiar pain

Let them finish — confirm what you heard — then bridge to ESource

The Four Discovery Categories

1

Situation

Establish context — team size, tools in use, growth phase

2

Problem

Surface pain — where the process breaks down, what costs the most time or money

3

Impact

Make inaction visible — what happens if this is not solved in six months

4

Priority

Reveal buying readiness — is this quarter or someday, and who else decides

Discovery Question Bank

Copy these questions into your CRM or note-taking tool for use on live calls.

Situation

"How large is your L&D team today? What tools and platforms are you currently using?"

Problem

"Where does your current process break down? If you could fix one thing about how training gets built, what would it be?"

Impact

"What happens to the business if this is not solved in the next six months? Have you tried to fix this before?"

Priority

"Is this on your roadmap for this quarter or more of a someday conversation? Who else needs to be involved?"

Copy directly from this slide for use in your own tools.

The Bridge Statement

Once you have heard enough, connect what they said to ESource — exactly like this:

"Based on what you just described, a lot of our clients in a similar situation have found that [ESource capability] addressed exactly that — can I tell you how it works?"

Keep it short. Keep it about them.

Discovery Role-Play

You play the rep. Your instructor plays the prospect.

After the role-play, ask your instructor which question categories you hit well and which ones you skipped.

Ask your instructor to start the discovery role-play when you are ready.

What a UVP Actually Is

A Unique Value Proposition is not a tagline

It is a calculated business case expressed in the prospect's own financial terms

If you cannot put a number on it, it is a claim — not a value proposition

The Core UVP Formula

Total Net Value equals Prospect Revenue Uplift plus Cost Savings minus Your Solution Cost

Pillar 1 — Revenue Uplift

What they gain

Pillar 2 — Cost Reduction and Efficiency

What they stop losing

Pillar 3 — Risk Mitigation and Time-to-Value

What delays are costing them right now

Open: [UVP Calculator](#)

A laptop on a desk displays a line chart with an upward arrow, indicating growth. The chart has multiple colored areas underneath the line, suggesting different data series or components. The laptop is on a wooden desk, and next to it is a cup of coffee with steam rising from it. There are also some papers and a pen on the desk. The background shows a city skyline through a window.

Pillar 1 — Revenue Uplift

Start with the prospect's annual revenue or pipeline value. Apply a realistic performance improvement percentage.

Example: an L&D team managing \$10M in onboarding-related revenue impact — a 15% development cycle improvement equals \$1.5M in additional pipeline capacity.

Use Optifai to generate industry-specific benchmarks when you need supporting data.

A photograph of a desk setup for financial calculation. In the foreground, a silver and black calculator sits on a large, printed spreadsheet. A silver pen lies horizontally behind the calculator. The spreadsheet contains various numerical data and formulas. In the background, a portion of a laptop is visible. The scene is lit with warm, natural light from a window on the left, creating a professional and focused atmosphere.

Pillar 2 — Cost Reduction and Efficiency

Hours per week spent on the problem × average hourly rate × number of people affected.

Example: 5 instructional designers, 10 hours each per week, at \$50 per hour equals \$2,500 per week — over \$130,000 per year.

Add any software subscriptions replaced by an ESource solution.

Pillar 3 — Risk Mitigation and Time-to-Value

Formula: $\text{Monthly Revenue} \times \text{Downtime or Delay Percentage}$.

A product launch stalled because training is not ready is a calculable loss — not just a frustration.

Estimate the delay, apply it to revenue, and make the cost of waiting real.

The UVP Sentence Template

Once your numbers are in, translate them into one sentence.

"We help [Target Persona] in the [Industry] industry increase [Specific Metric] by [Percentage or Dollar Amount] and reduce [Pain Point] by [Dollar Amount] in the first [Timeframe]."

Copy this template into your email composer, CRM, or drafting tool for use on your next call.

Use the [UVP Calculator](#) to discover the one-sentence UVP proposition

A full-page photograph of two men in a modern office setting. The man on the left, wearing a light blue shirt and tan trousers, is pointing at a whiteboard with a blue marker. The man on the right, wearing a dark suit, is gesturing with his hand while looking at the whiteboard. The whiteboard features a complex diagram with various labels and arrows, including terms like 'COGNATIVES', 'INDUTIE NEN', 'FEARLS', 'OPOTS', 'APIES', 'LACKKE', 'ABSE EPE', 'MILITUR', 'OPSTERUNG', 'PMOLE QUIN', 'THESEOMEN', 'S. RAIN MSOUTEN', 'CRACKSOFIDAD', 'INDUTIE NEN', 'FEARLS', 'OPOTS', 'APIES', 'LACKKE', 'ABSE EPE', 'MILITUR', 'OPSTERUNG', 'PMOLE QUIN', 'THESEOMEN'. The office has large windows in the background, providing a view of a city. The floor is made of large, light-colored tiles. A small table with a chair is visible in the foreground on the right.

Ask your instructor to walk you through the calculation out loud and help you build your one-sentence UVP for that prospect.

Optional Knowledge Check

A private five-question confidence check is available right now — nothing is recorded and nothing is graded.

It covers prospect fit signals, discovery question categories, UVP formula pillars, and the UVP sentence template.

Ask your instructor to run the knowledge check when you are ready, or move on to the close.

You Are Ready — Here Is Your Next Move

You can now qualify a prospect, run a structured discovery, match ESource solutions to real needs, and build a spoken value proposition.

Your next step: identify one real prospect, run the two-minute fit check, and schedule the discovery call.

Ask your instructor any final questions before you go.
